

2-Pager

Africa Tourism Intelligence Platform

Problem Statement

Travel within Africa remains largely unexplored by Africans themselves, with many preferring destinations outside the continent due to lack of awareness, limited budget-friendly options, and inadequate travel resources. Despite Africa's rich cultural heritage, diverse landscapes, and unique experiences, there is insufficient promotion of intra-African tourism. This has led to missed opportunities for economic growth, cultural exchange, and adventure within the continent. Existing travel platforms often focus on external markets and fail to cater specifically to African travelers' needs, budgets, and preferences.

Solution

We are developing a comprehensive travel platform specifically designed to showcase African destinations and inspire adventure among Africans. The platform will provide budget-conscious travel options, detailed travel guides, customized itineraries, and a vibrant community space for sharing experiences and recommendations. By making African travel accessible, affordable, and appealing, we aim to foster a culture of exploration and adventure within the continent while supporting local tourism economies.

Key Features

Discovery

Destination Showcase

Explore curated African destinations with stunning visuals, cultural insights, and unique experiences that highlight the continent's diversity and beauty.

Budget-Friendly Options

Access affordable travel packages, budget accommodations, and cost-effective transportation options tailored for African travelers.

Planning

Custom Itineraries

Generate personalized travel itineraries based on interests, budget, duration, and preferred activities using intelligent planning tools.

Additional Features

Community

Experience Sharing

Connect with fellow African travelers, share experiences, photos, and recommendations through an interactive community platform.

Guides & Resources

Comprehensive Travel Guides

Access detailed guides covering visa requirements, local customs, safety tips, and must-see attractions for each African destination.

Adventure

Adventure Planning

Discover and plan adventure activities like safari tours, mountain climbing, cultural immersion experiences, and off-the-beaten-path explorations.

Target Audience

The target audience includes adventure-seeking Africans, young professionals, families, and travel enthusiasts who want to explore their own continent. This includes diaspora Africans seeking to reconnect with their roots, budget-conscious travelers looking for affordable African experiences, and cultural enthusiasts interested in authentic African adventures. The platform focuses on millennials and Gen Z across African countries who value authentic experiences and community-driven recommendations.

Early Adopters

- **Young African Professionals** particularly those in major African cities with disposable income and a desire for unique experiences
- **Travel bloggers and influencers** who focus on African content and seek authentic destinations to showcase
- **African diaspora communities** looking to explore and reconnect with the continent through meaningful travel experiences
- **University students and recent graduates** interested in budget-friendly adventure travel within Africa (leverage campus partnerships and student networks)
-

PRD

Africa Tourism Intelligence Platform

(Africa-First • Budget-Aware • AI-Assisted • Community-Driven • Mobile-First)

PART 1: PRODUCT REQUIREMENTS (PRD)

1) Problem

Despite Africa's vast cultural diversity, natural beauty, and unique travel experiences, **intra-African tourism remains significantly underdeveloped**.

- Many Africans prefer traveling outside the continent due to:
 - Limited awareness of African destinations
 - Lack of centralized, trusted travel information
 - Perception that African travel is expensive, unsafe, or complex
- Existing global travel platforms:
 - Are designed primarily for non-African travelers
 - Do not optimize for African budgets, visa realities, or regional transport
 - Overlook local insights, informal travel patterns, and community knowledge
- Practical travel intelligence (visa rules, safety tips, real costs, cultural norms) is fragmented across blogs, social media, and outdated websites

Impact

- Africans miss opportunities to explore their own continent
- Local tourism economies lose potential growth
- Cultural exchange within Africa remains limited

Need

A single, Africa-first travel intelligence platform that helps Africans **discover, plan, and share** affordable, authentic travel experiences within Africa—built around real constraints, not idealized tourism.

2) Solution (What we'll build)

The **Africa Tourism Intelligence Platform** is a smart travel companion designed specifically for Africans.

It will:

- **Interactive AI Planner:** A smart "Concierge" that interviews the user (preferences, budget, vibe) and generates a tailored itinerary using LLMs (Gemini/GPT).
- **Community Package Marketplace:** A platform where any user can publish their trip path. These become public "Packages" that others can view, rate, and replicate.
- **Streamer Tracks:** A dedicated section for famous routes (starting with the "IShowSpeed Tour") allowing fans to walk in the footsteps of their favorite creators.
- Showcase African destinations with **local context**, cultural depth, and practical guidance
- Help users plan **budget-conscious, personalized trips**
- Provide **clear, actionable travel intelligence** (visa, safety, customs, costs)

The platform focuses on **accessibility, affordability, and authenticity**, encouraging Africans to explore Africa.

3) Goals & Success Metrics (V1)

Adoption

- $\geq 5,000$ registered users within first 2 months
- $\geq 30\%$ of users create at least one itinerary

Engagement

- $\geq 40\%$ of sessions include exploring 3+ destinations
- $\geq 25\%$ of active users interact with community content (post, comment, save)

Planning Effectiveness

- $\geq 60\%$ of itinerary creation flows completed
- Average itinerary generation time ≤ 4 seconds

Content Trust

- $\geq 90\%$ of destination pages show source and "last updated" indicators for critical info (visa, safety, cost)
-

4) Core Principles

- **Africa-First:** Built for Africans, not adapted from global travel platforms
 - **Budget-Aware by Default:** Always surface affordable and realistic options
 - **Practical over Aspirational:** Clear guidance beats glossy marketing
 - **Community-Led:** Real traveler insights matter more than ads
 - **Transparent:** Clearly label estimates, uncertainty, and data freshness
-

5) In-Scope vs Out-of-Scope (V1)

In-Scope

- African destination discovery (countries, cities, regions)
- Budget-friendly travel insights (cost ranges, low-cost stays, transport modes)
 - **Interactive AI Wizard:** Questionnaire-based planning (Budget, Duration, Vibe).
- AI-assisted itinerary planning
 - **LLM Integration:** Direct API calls to Gemini/OpenAI for itinerary logic.
- Travel guides:
 - Visa requirements (passport-specific)
 - Local customs & etiquette
 - Safety considerations
- Adventure activity discovery (safari, hiking, cultural immersion)
 - **Celebrity Paths:** Hard-coded "IShowSpeed" and other influencer routes.
 - **User-Generated Packages:** Public profile for trip creators; ability to publish itineraries.
- Community experience sharing (posts, tips, photos)
 - **Ranking System:** Sorting packages by Rating (Stars) and Popularity (View count).
 - Add "Package-specific chat rooms/discussion threads."
- Planning: Add "Multi-country tour support" and "Climate-based filtering".

Out-of-Scope

- Direct booking or payments
 - Flight/hotel ticketing
 - Visa application processing
 - Travel insurance or financial products
 - Influencer monetization tools
-

6) Key Features (V1)

Discovery

Destination Showcase

- Curated African destinations with:
 - Cultural and historical context
 - Highlights & unique experiences
 - Best time to visit
 - Estimated daily budget (low / medium / high)
 - “Good for students”, “Family-friendly”, “Adventure-heavy” tags

The AI Planning Concierge

- **The "Interview":** Upon clicking "Plan a Trip," the user is guided through a conversational UI.
 - *Question 1:* "Where to?" (Specific Country/City or "Surprise Me" based on region).
 - *Question 2:* "How long?" (Duration in days).
 - *Question 3:* "What's the budget?" (Low/Student, Medium, Luxury).
 - *Question 4:* "What is your vibe?" (Select tags: Adventure, Smooth/Relaxed, Foodie, History, Party).
 - *Question 5:* "What's your preferred climate?" (Tropical, Desert, Coastal, Highland)
- **The Output:** The app calls the AI API (Gemini/GPT) to generate a structured Day-by-Day plan matching these exact constraints.

Budget-Friendly Options

- Cost indicators for:
 - Accommodation
 - Local transport
 - Food & activities
 - Clear labeling of estimates vs confirmed costs
-

Planning

Custom Itineraries

- AI-assisted itinerary generator:
 - Inputs: budget, duration, interests, travel style
 - Outputs: day-by-day plan with estimated costs

- Editable itineraries (add/remove/reorder days)
 - Save and reuse itineraries
-

Guides & Resources

Travel Intelligence

- Visa requirements by nationality (clearly sourced)
 - Safety notes & cultural etiquette
 - Currency, payment methods, and local transport tips
-

Adventure

Adventure Planning

- Discover and explore:
 - Safari and wildlife tours
 - Mountain hiking & nature trips
 - Cultural immersion experiences

"IShowSpeed" & Influencer Packages

- **Concept:** Curated "Verified" packages that mirror the exact routes taken by famous streamers during their African tours.
 - **Features:**
 - Map overlay showing the streamer's stops.
 - Embedded clips/links to the stream moments at those locations.
 - "Vibe Check" tags (e.g., "High Energy," "Crowded," "Viral Spots").
 -
 - Filter by activity type and difficulty level
-

Community

Experience Sharing

- Users share trips, tips, photos, and recommendations
- Destination-specific discussions
- Save and upvote helpful content
- Clear moderation and reporting rules

Community Packages (User Paths)

- **Create & Publish:** Users can take their AI-generated plan (or build one manually), give it a catchy title (e.g., "3 Days of Accra Nightlife"), and toggle it to **"Public."**
 - **The Marketplace:** A main feed listing all public packages.
 - *Sorting:* Sort by **"Highest Rated"** or **"Most Popular"** (Views).
 - *Interaction:* Other users can leave a 1-5 star rating and comment on their experience with that specific path.
 - **Real-Time Interactions:** Each package will include chat rooms or discussion threads where users who are in the package can communicate.
-

7) Target Users

- Africans aged 18–45:
 - Young professionals
 - University students and recent graduates
 - Families seeking regional travel
 - African diaspora:
 - Reconnecting with heritage and culture
 - Budget-conscious travelers
 - Culture and adventure enthusiasts
-

8) Early Adopters

- Young African professionals in major cities
- African travel bloggers and creators
- Diaspora communities
- University students and campus travel clubs
- Youth-focused cultural and adventure groups

PART 2: DESIGN PLAN

1) Information Architecture

- **Home/Feed:** Top Rated Packages, "IShowSpeed" Feature, Trending Destinations.
- **AI Planner (FAB - Floating Action Button):** The central trigger to start the planning interview.
- **Marketplace:** Searchable list of user packages (Sort: Ratings, Views).
- **My Trips:** Drafts, Saved Packages, and Published Paths.

2) Core UI Components

- **The "Package" Card:**
 - Title ("Hidden Gems of Lagos") + Author Username.
 - Star Rating (4.8/5) + View Count (1.2k views).
 - Tags (Foodie, \$200 Budget).
- **The Streamer Badge:** Special "Verified Streamer Route" icon for IShowSpeed packages.
- **The Wizard UI:** A sleek, step-by-step form for the AI inputs (avoiding complex text inputs, using buttons/sliders).
- **Destination Card**
 - Image, country, budget range, tags
- **Budget Meter**
 - Low / Medium / High cost indicator
- **Itinerary Timeline**
 - Day-by-day plan with cost estimates
- **Travel Info Badge**
 - Visa | Safety | Cost | Updated
- **Community Post Card**
 - User, destination, tip, upvotes

3) Visual Style

Colors

- Earthy, warm tones (sand, green, sunset orange)
- Neutral backgrounds for readability

Typography

- Clean, modern sans-serif
- Strong hierarchy for mobile readability

Imagery

- Real African locations and people
- Avoid over-polished, stock-tourism visuals

4) Tone

- Inspiring but grounded
- Inclusive and pan-African
- Honest about challenges and constraints
- Community-respectful, no elitism

PART 3: TECHNICAL ARCHITECTURE

1) High-Level System Flow

The system follows a **Modular Monolith** architecture (for V1 simplicity but easy future scaling) with a clear separation between the Mobile Client, the API Backend, and the AI Services.

System Flow Layers

1. **Presentation Layer (Mobile App):** Handles user inputs (The "Interview"), displays maps, and manages offline local storage.
 - Mobile-first application (Android priority)
 - Offline-friendly for saved trips and guides
 - Web based application
2. **API Gateway / Backend Layer:** Validates requests, manages user authentication, and orchestrates data fetching.
 - Stateless API for content, planning, and community
 - AI orchestration layer (planning & summarization only)
3. **Service Layer:**
 - **Planner Service:** Logic for assembling itineraries.
 - **Community Service:** Handles posting packages, ratings, and comments.
 - **AI Service:** Dedicated interface for communicating with LLMs (Gemini/GPT).
4. **Data Layer:** PostgreSQL (Relational Data), Redis (Caching), and Object Storage (Images).

User Input (Preferences) → Prompt Engineering → LLM API (Gemini/GPT) → JSON Response → UI Rendering → User Saves/Publishes → Community Database

3) Suggested Tech Stack (V1)

Mobile

- Flutter
 - State management
 - Offline storage (SQLite / Hive)
 - Image caching
 - Connectivity detection

Web

- Next.js

Backend

- mks

AI

- LLM API for:
 - Itinerary generation
 - Budget estimation summarization
 - **LLM Provider: Google Gemini Pro or OpenAI GPT-4o-mini.**
 - **Format Control:** Strict JSON Mode enforcement to ensure the AI outputs machine-readable data, not conversational text.
- No model training
- Strict prompt constraints (no hallucination)

Database

- PostgreSQL (core data)
- Redis-class cache (popular destinations & itineraries)

4) Data Model (Sketch)

Field	Type	Description
id	UUID	Primary Key
username	String	Unique display name
email	String	

role	Enum	user, admin, verified_creator
avatar_url	String	

Packages (Itineraries) Table

Core unit of the platform – represents a full travel experience

Field	Type	Description
id	UUID	Primary key
creator_id	UUID	Foreign key - Users table
title	String	e.g., "IShowSpeed's Chaos Tour"
description	Text	Short summary of the itinerary
country	String	Target country
city	String	Target city (nullable for multi-city trips)
climate_pref	String	Target Climate
is_multi_country	Boolean	True/False
is_public	Boolean	true = visible in marketplace

is_streamer_verified	Boolean	Key feature: shows verified streamer badge
streamer_name	String	e.g., <i>IShowSpeed</i> , <i>Kai Cenat</i> (nullable)
total_cost_est	Decimal	Calculated total estimated cost
currency	String	e.g., USD, KES
view_count	Integer	Used for “Popular” sorting
avg_rating	Decimal	Cached average rating (1.0 – 5.0)
created_via_ai	Boolean	Tracks AI-generated vs manual creation

Itinerary_Items (The Path) Table

Linked to Packages – represents daily stops and activities

Field	Type	Description
id	UUID	Primary key
package_id	UUID	Foreign key - Packages table
day_number	Integer	Day number (Day 1, Day 2, etc.)
order_index	Integer	Sequence within the day (morning – night)
location_name	String	e.g., <i>Black Star Gate</i>

geo_lat	Float	Latitude
geo_long	Float	Longitude
activity_t ype	Enum	food, adventure, culture, party
notes	Text	AI-generated tip or user-added note

Reviews Table

Field	Type	Description
id	UUID	Primary Key
package_id	UUID	FK to Packages
user_id	UUID	FK to Users
rating	Integer	1-5 Stars
comment	Text	User feedback

Chat Table

Field	Type	Description

id	UUID	primary_key
user_id	UUID	FK to Users
package_id	UUID	FK to packages

4. API Specification (Core Endpoints)

A. AI Planning Endpoints

POST /api/v1/planner/generate

- **Request Body:**

JSON

```
{
  "destination": "Nairobi, Kenya",
  "duration_days": 3,
  "budget_level": "medium", // low, medium, luxury
  "vibe_tags": ["adventure", "nightlife"],
  "group_size": 2
}
```

- **Logic:**

1. Check Redis Cache for identical request.
2. If miss, build Prompt.
3. Call AI API.
4. Parse JSON.
5. Return structured plan.

- **Response:** JSON object of the itinerary (preview mode).

B. Marketplace Endpoints

GET /api/v1/packages

- **Query Params:**

- sort_by: rating, views, newest

- streamer_only: true (To filter for IShowSpeed packages)
- country: Ghana
- **Response:** List of Package Cards (paginated).

POST /api/v1/packages/{id}/publish

- **Action:** Toggles is_public to true. Validates that the trip has a title and at least 3 items.

POST /api/v1/packages/{id}/rate

- **Request Body:** {"rating": 5, "comment": "Loved the path!"}
- **Logic:** Updates Reviews table AND recalculates avg_rating on the Packages table (async job).

5. AI Orchestration Logic (The "Brain")

This is the most critical logic block. We do not just "ask ChatGPT." We engineer the interaction.

The Prompt Structure:

Plaintext

Role: You are an expert African travel guide.

Context: Create a structured itinerary for a user.

Input Data:

- City: {User_City}
- Budget: {User_Budget} (Note: Be realistic with prices in {User_City})
- Vibe: {User_Tags}

Constraint 1: Output MUST be valid JSON.

Constraint 2: Do not invent hotels. Use real, well-known landmarks.

Constraint 3: Include an estimated price for each activity in USD.

JSON Schema:

```
{
  "title": "String",
  "currency": "USD",
  "days": [
```

```
{
  "day_num": 1,
  "activities": [
    {
      "name": "Place Name",
      "type": "food/adventure",
      "description": "Short tip",
      "est_cost": 20
    }
  ]
}
```

Validation Layer: Before saving the AI response to the database, the Backend runs a validation check:

1. **JSON Syntax Check:** Is it valid JSON?
2. **Hallucination Check (Optional V1.5):** Cross-reference the "Place Name" with Google Places API to ensure it actually exists. If it doesn't return a result, flag it or remove it.

PART 4: EXECUTION PLAN

Team (18–20)

- Backend (9)
- Web(5)
- Mobile (5)

Timeline (6 Weeks)

Week 1 — Foundations

- Finalize destinations schema
- Seed 10–15 African destinations
- Mobile app skeleton
- Backend scaffolding

Deliverable

- Browse destinations

- Static guides

Week 2 — Discovery & Guides

- Destination detail pages
- Budget indicators
- Visa & safety guides
- Offline saving

Deliverable

- End-to-end discovery flow

Week 3 — Itinerary Planning

- AI itinerary generator
- Budget estimation logic
- Editable itinerary timeline

Deliverable

- Generate and save itineraries

Week 4 — Community

- Community posts
- Destination discussions
- Upvotes and reporting

Deliverable

- Share and browse experiences

Week 5 — Polish & Optimization

- Performance tuning
- Offline handling
- Content freshness badges

Week 6 — Demo & Hardening

- Bug fixes
- Demo scripts
- Monitoring and logs

2 WEEK OF Buffer time

PART 5: RISK REGISTER

ID	Risk	Impact	Likelihood	Mitigation
R1	Inaccurate cost estimates	High	Medium	Use ranges + disclaimers
R2	Visa info complexity	High	Medium	Passport-specific labels
R3	AI hallucinations	High	Low	Strict prompts + field-only inputs
R4	Community spam	Medium	Medium	Moderation & reporting
R5	Offline UX weak	Medium	Medium	Cache guides & trips
R6	Content staleness	Medium	Medium	“Last updated” badges

PART 6: TEST PLAN

Functional

- Destination discovery works
- Itinerary generation returns valid plans
- Guides display correct sources

- Community posts render correctly
- Save & offline access works

Edge Cases

- Missing visa info → clear message
- Empty community → prompt first post
- Low connectivity → cached content
- Partial itinerary inputs

Performance

- Destination load $\leq 2.5s$
- Itinerary generation $\leq 4s$
- Smooth scrolling on low-RAM devices

Localization

- Currency display by country
- Regional date formats
- Expandable language support

PART 7: HAND-OFF NOTES FOR JUNIOR ENGINEERS

- Do **not** build booking flows in V1
- Treat all costs as **estimates**
- Always show data source and freshness
- Cache aggressively
- AI summarizes only provided data
- Prioritize:
 Discover → **Plan** → **Share** demo flow
- Build for **clarity and trust**, not feature count

meeting note

Mar 5, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#) [Abenezer Shiferaw](#) [Yakob Assefa](#) [Adnan Abda](#) [Ehenew Demlie](#) [Ammar Omar](#) [Mohamed Fatnassi](#) [Dawit Zewdu](#) [Samuel Negussie](#) [Oliya Diriba](#)

Notes:

- Assessed everyone's status on last week's tasks.

Mar 3, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#) [Abenezer Shiferaw](#) [Yakob Assefa](#) [Adnan Abda](#) [Ehenew Demlie](#)

Note Taker: [Arsema Zeweldi](#)

Notes:

- Assessed backend team's progress on tasks

Mar 2, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#) [Oliya Diriba](#) [Abenezer Shiferaw](#) [Malak Mohamed Ahmed](#)

Note Taker: [Arsema Zeweldi](#)

Notes:

- Attendance was too small to decide on weekly plan and assess status of last week's task

Feb 27, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#) [Yakob Assefa](#) [Oliya Diriba](#) [Adnan Abda](#) [Samuel Negussie](#) [Ammar Omar](#)

Note Taker: [Arsema Zeweldi](#)

Notes:

- Adjusted the figma design for both web and mobile to include one more page in the "Plan Your Trip" forms. The page has one open ended question for users to add additional information that they believe is important for the trip planning process.
- We also added disclaimers to a few pages to show that we will only be responsible for itinerary generation and connecting users with the community through package chats and that other things on the ground will be handled by third party travel agents and tour guides.
- Added 3 onboarding pages to the mobile figma design.

Feb 26, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#) [Yakob Assefa](#) [Oliya Diriba](#) [Adnan Abda](#) [Dawit Zewdu](#) [Malak Mohamed Ahmed](#) [Ammar Omar](#) [Abenezer Shiferaw](#)

Note Taker: [Arsema Zeweldi](#)

Notes:

- Everyone gave a status update on their tasks and most people will be done with their tasks for this week by Monday at the latest.

Action Items:

- Add onboarding pages to the mobile figma design

Feb 24, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#)[Yakob Assefa](#)[Oliyad Diriba](#) [Adnan Abda](#) [Samuel Negussie](#) [Dawit Zewdu](#) [Malak Mohamed Ahmed](#)[Ammar Omar](#)[Aaron Abenezer](#) [Shiferaw](#)

Note Taker: [Arsema Zeweldi](#)

Notes:

- Back-end team members [Adnan Abda](#), [Aaron](#), [Abdulaziz Redi](#), [Ehenew Demlie](#), and [Abenezer Shiferaw](#) were assigned their tasks for this week

Feb 23, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#)[Yakob Assefa](#)[Oliyad Diriba](#) [Adnan Abda](#) [Samuel Negussie](#) [Dawit Zewdu](#) [Malak Mohamed Ahmed](#)[Mohamed Fatnassi](#)[Ammar Omar](#)[Aaron Abenezer](#) [Shiferaw](#)

Note Taker: [Ammar Omar](#)

Weekly plan:

- Web
 - Plan your-trip pages
 - ~~New package page~~
 - Package-details page
 - ~~Feed page~~
 - Market-place page
- Mobile
 - Finish up the UI
 - Finish up the wiring
 - Finish up onboarding features
- back-end
 - Backend Architecture, database integrity
 - Build and manages ai integration
 - develops destination discovery, search and content management
 - Implement travel packages, reviews , and community interaction system
 - handle visa logic, safety alerts and system monitoring improvements

Notes:

- we discussed some changes on the figma design based on [Emre Varol](#)'s comments

- Back-end.
they initialize their repo and created a few api end points
- Mobile
they initialized the architecture, dependencies, most of logic part and they currently working on UI and wiring.
- Web (front-end)
They have finished all their task for the week.

Feb 20, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema ZeweldiYakob AssefaOliyad Diriba Adnan Abda Samuel Negussie Dawit Zewdu Yakob Assefa Malak Mohamed Ahmed](#)

Note Taker: [Oliyad Diriba](#)

Notes:

- It is better if we create a feature branch when we work on a specific feature and then merge with the main branch if there is no conflict.

Feb 19, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Malak Mohamed AhmedArsema ZeweldiYakob AssefaOliyad DiribaEhenew Demlie Adnan Abda Samuel Negussie Dawit Zewdu Ammar OmarMohamed Fatnassi](#)

Note Taker: [Samuel Negussie](#)

Notes:

- Mobile
 - Finalized the data layer
- Web
 - Divided task for the home page implementation
 - Finished landing, login, sign up pages
- Backend
 - Progress deciding on schema

Feb 17, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Malak Mohamed AhmedArsema ZeweldiYakob AssefaOliyad DiribaAaronEhenew Demlie](#)

Note Taker: [Arsema Zeweldi](#)

Notes:

- Backend team go over schema design
- Web and Mobile team work on assigned tasks

Feb 16, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Malak Mohamed Ahmed](#)[Arsema Zeweldi](#)[Merwa Sadik](#)[Mohamed Fatnassi](#)[Yakob Assefa](#)[Oliyad Diriba](#)[Samuel Negussie](#)[Abdulaziz Redi](#)

Weekly Plan:

- Web
 - Complete Login, Sign up, Forgot Password Pages
 - Complete Landing Page
 - Complete Home Page
- Mobile
 - K

Notes:

- Dev 1 (The Architect): Project Scaffold & Core: [Mohamed Fatnassi](#)
- Dev 2: Authentication for Domain & Data Layers: [Oliyad Diriba](#)
- Dev 3: The UI (Authentication - Presentation): [Malak Mohamed Ahmed](#)
- Dev 4 : Onboarding Feature & Splash Screen [Dawit Zewdu](#)

Feb 13, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Malak Mohamed Ahmed](#)[Arsema Zeweldi](#)[Yakob Assefa](#)[Oliyad Diriba](#)[Merwa Sadik](#)[Samuel Negussie](#)[Mohamed Fatnassi](#)

Note Taker: [Arsema Zeweldi](#)

Agenda:

- Finalize the figma designs
- Assign tasks for web team

Notes:

- Figma designs finalized and submitted to Kibrewossen

Action Items:

- Build the Signup, Login, and Forgot Password Pages
- Build the Landing Page
- Build the Home Page [Merwa Sadik](#)

Feb 12, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Malak Mohamed Ahmed](#)[Adnan Abda](#)[Arsema Zeweldi](#)[Ammar Omar](#)[Yakob Assefa](#)[Dawit Zewdu](#)[Aaron](#)[Oliyad Diriba](#)[Merwa Sadik](#)[Samuel Negussie](#)

Note Taker: [Adnan Abda](#)

Agenda:

- Choosing the right name for the project
- Going through the figma design for web and mobile

Notes:

- We created a poll on telegram for people to vote on the project name.
- We added team members to the project repository.
- Refined the figma designs and designed the interaction between pages.

Action Items:

- Initialize the web folder of the repo with [Next.js](#), React, and Tailwind scaffolding
- Initialize the mobile folder
- Initialize the backend folder
- Assign the first tasks to group members

Feb 10, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#)[Mohamed Fatnassi](#)[Yakob Assefa](#)[Abdulaziz Redi](#)[Adnan Abda](#)

Note Taker: [Mohamed Fatnassi](#)

Agenda:

- Some tweaks with the Figma layout
- Creating the Repository

Notes:

- Ai-planner → plan your trip
- Discussing turning the mobile version to web so that they both match
- Creating a repo for the project
- Adnan will do and push the folder structure
- Logo palette: shades of orange, yellow, red, brown, green

Action items:

- ~~Decide what to name the project~~
- ~~Decide on the Logo~~
- ~~Finalize Figma~~

Feb 9, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#)[Oliya](#)[Diriba Dawit Zewdu](#)[Adnan Abda](#)[Merwa Sadik](#)[Darilton Mário](#)[Samuel Negussie](#)[Malak Mohamed Ahmed](#)[Mohamed Fatnassi](#)

Note Taker: [Oliya Diriba](#)

Agenda:

- Team should go through the feature specifications tab [link](#)

-

Notes:

- We have developed the figma design for the mobile and web

Feb 6, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#)[Yakob Assefa](#)[Oliyad Diriba](#)[Dawit Zewdu](#)[Adnan Abda](#)[Malak Mohamed](#)[Ahmed Merwa](#)[Sadik](#)

Note Taker: [Yakob Assefa](#)

Agenda:

- Go over the competitor metrics assessment
- Layout for web

Notes:

- Picked layout for the Web version of the app
- Discussed on how we can improve on competitor apps
- Developed a competitor matrix to compare our product to Tripify, in Africa, and itineraryAfrica

Feb 5, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Arsema Zeweldi](#)[Mohamed Fatnassi](#)[Yakob Assefa](#)[Aaron Oliyad Diriba](#)[Dawit Zewdu](#)[Adnan Abda](#)[Samuel Negussie](#)[Ammar Omar](#)[Malak Mohamed](#)[Ahmed](#)

Note Taker: Malak Mohamed

Agenda:

- Refine the wireframe

Notes:

- We should remember to ask the heads about the repo.
- Review the websites of our competitors and build a competitor matrix.

→ Packages' cards and description pages

- Add a box that contains the category of the package.
- We should add a brief description about each package in the main page other than the detailed description that exists inside the description page.
- Add an arrow icon (or any suitable one) in the package card to be visually clear for the user; if they need more details, they need to click on it.
- Add a video inside the description page of each package for more clarity.

- Make the packages by default “public,” and the user, while creating the package, can change it if they want.

→ Feed tab

- Change the posts that are related to a personal (private) package to not be visible for everyone.
- The posts are going to be connected to the privacy of the package, if the package is public, the posts will be public by default public, while if the packages were private, the posts are going to be only visible for the people who the user shared the package.

Feb 3, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Mohamed Fatnassi](#) [Darilton Mário](#) [Aaron Abdulaziz Redi](#) [Arsema Zeweldi Adnan Abda](#) [Yakob Assefa](#) [Oliyad Diriba](#) [Ammar Omar](#) [Merwa Sadik](#)

Note Taker: [Oliyad Diriba](#)

Weekly plan

- ~~Finalize the PRD~~
- ~~Get started with wireframe~~
- ~~Color scheme ideas~~
- ~~Work on SRS and SDD~~
-

Agenda:

- Finalize the PRD

Notes:

- Review the UI/UX track for clear understanding of how to use figma for our design
- Deciding which type of database are we going to use (mongodb or postgresql)
- Before starting to work on the backend staff, let's finish the documentation or SRS (software requirement specification)

Feb 2, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Abdulaziz Redi](#) [Ammar Omar](#) [Arsema Zeweldi](#) [Darilton Mário](#) [Dawit Zewdu](#) [Malak Mohamed Ahmed](#) [Merwa Sadik](#) [Mohamed Fatnassi](#) [Oliyad Diriba](#) [Samuel Negussie](#) [Aaron Adnan Abda](#)

Note taker: [Yakob Assefa](#)

Agendas:

- PRD - Africa Tourism
- USECASE

Notes

- Have a recommendation system that would give the user destinations based off of their interactions, budget, and ongoing trends.
- Add a snapchat like map that shows pictures people took at places.
- Keep 'Surprise Me' destination option, select country then city
- Allow multi-country option

Jan 30, 2026 | [A2SV <> Project Phase \(MVP\)](#)

Attendees: [Oliyad Diriba](#)[Mohamed Fatnassi](#)[Aaron Yakob](#)[Assefa Dawit](#)[Zewdu Abdulaziz](#)
[Redi Merwa](#)[Sadik Ehenew](#)[Demlie Samuel](#)[Negussie](#)

Note taker: [Arsema Zeweldi](#)

https://www.tiktok.com/@lil.roamy/video/7595685195701914902?_r=1&t=ZS-93QC7HlzHKW

Agendas:

- PRD - Africa Tourism
- USECASE -
- CREATING a TELEGRAM GROUP-

Notes

- Allow users to enter their preferences, budgets, and duration first so that even if users don't have a specific country in mind, we can use AI to suggest based on the information entered.
- Include climate as a preference because we have a wide variety of climates in Africa
- Have a functionality for users to interact or chat which are in the same community package

Action items

- ~~For all team members reading the PRD for africa tourism~~ [link](#)
- ~~Deciding on use case or features~~
- ~~Creating a TELEGRAM GROUP~~

Feature Specifications

Feature Specification Document: Africa Tourism Intelligence Platform (V1.1)

This document serves as the finalized feature specification, expanding the initial Product Requirements Document (PRD) to include advanced logic for multi-country travel, climate-based inputs, and a community-driven feed.

1. Enhanced AI Planning Concierge (The "Interview")

The core planning tool uses a conversational UI to generate structured Day-by-Day plans via LLMs (Gemini/GPT).

1.1 Location & Climate Inputs

- **Step 1: Destination Selection:** Users select a **Country**, which then filters a secondary **City** dropdown (including a "Surprise Me" regional option).
- **Step 2: Multi-Country Toggle:** A new option to plan tours across multiple countries, triggering AI logic to prioritize regional transport and visa-on-arrival hubs.
- **Step 3: Climate Preference:** A new input allowing users to filter by environment (e.g., Tropical, High Altitude, Coastal).
- **Step 4: Vibe & Budget:** Users select "Vibe" tags (Adventure, Foodie, etc.) and budget tiers (Low/Student, Medium, Luxury).

2. Community Feed & Marketplace Logic

The Home/Feed is a dynamic discovery engine that aggregates three content types: "Streamer Tracks," "Community Packages," and "Trending Destinations".

2.1 Ranking & Sorting

- **Popularity:** Sorting based on `view_count` and star ratings.
- **Vibe Match:** The feed prioritizes packages matching the user's previously selected "Vibe" tags or "Climate" preferences.
- **Verification:** "Streamer Tracks" (e.g., IShowSpeed Tour) are prominently badged and feature embedded stream clips.

2.2 Package-Specific Interaction (Chat)

- **Real-time Discussion:** Each public package features a destination-specific discussion area for real-time tips and "Vibe Checks".
- **User Actions:** Users can save itineraries, upvote helpful comments, and report outdated info.

3. Technical Architecture Updates

The system uses a **Modular Monolith** architecture with a Flutter mobile priority.

3.1 Data Model Extensions

Feature	Implementation
Location	Packages table supports country and city (nullable for multi-city).
Influencers	is_streamer_verified flag triggers the special badge UI.
Planning	created_via_ai tracks manual vs. AI-generated paths.
Chat	Reviews table stores user ratings (1-5 stars) and feedback comments.

3.2 AI Prompt Constraints

- **Format:** Must output valid JSON using a strict schema (title, currency, day-by-day activities).
- **Safety:** Do not invent hotels; use real landmarks and provide estimated prices in USD.
- **Validation:** The backend runs a JSON syntax check and landmark verification against mapping APIs.

4. Execution Plan (6-Week V1)

- **Weeks 1-2:** Foundation, destination schema, and "Discovery" flow (Visa/Safety guides).
- **Weeks 3-4:** AI Generator logic, budget estimation, and Community post features.
- **Weeks 5-6:** Offline caching, performance tuning, and final "Hardening".

5. Risk Register

- **R1: Inaccurate Costs:** Mitigated by using ranges and clear "estimate" disclaimers.
- **R2: Visa Complexity:** Mitigated by passport-specific labels and sourcing data.
- **R3: AI Hallucinations:** Mitigated by strict prompt engineering and landmark validation.
